Education

Middle East Technical University - BS — Ankara, Türkiye
Computer Engineering**, cGPA: **3.96**, **3th** place among **200 — *2021 - 2026*

Middle East Technical University — Ankara, Türkiye
Minor degree in Business Administration, Entrepreneurship, cGPA:3.83 — *2023 - 2026*

Experience

Sinopsis - Software Developer — Sep 2024 – Present

- Worked to implement and optimize two labeled computer vision models, achieving a **20%** performance improvement for local web app usage.
- Secured backend services with **Firebase Admin** and **CORS** policies, enhancing data protection
- Developed a web data visualization platform using **React** and **TypeScript**, improving UX.
- Integrated **Firebase Analytics** to monitor user behavior, driving data-driven improvements.
- Developed algorithms for anomaly detection of vessels in **C++** and **Python** within backend services.

BTS Labs - Software Engineering Intern — Jul 2024 – Aug 2024

- Participated in an **anomaly detection** project, learning **KVM** for virtualization monitoring.
- Used **Go** and **Docker** to develop and deploy independent project components.

Google DSC - Coordinator & AI/ML Team Lead — September 2023 – Present

- Drove **300%** growth in workshop attendance and increased tech accessibility by **60%**.
- Led a productive team, boosting tech project output by **50%** and organizing weekly Machine Learning sessions on Python and TensorFlow.
- Enhanced diversity and visibility with **150%** growth in Women in Tech and **80%** follower growth.
- Organized workshops on **Python** and **Google Gemini**, providing essential resources for software development and project management.

Turna Technology - Software Engineering Intern — Jun 2023 – Aug 2023

- Took part in development of AI Assisted Media Archive (MEDAR).
- Development of mobile application of MEDAR by using **MySQL** and **Flutter** (Feb 2024).

Achievements and Projects

IMG-FIN | *Python, FAISS, CLIP* — May 2024 – Oct 2024

- Collaborated with my professor and assistant to develop an AI-based database manager for fast content search using **CLIP embeddings** and **FAISS**.
- Achieved **50%** increase in archive usage efficiency.
- Tested **FAISS** models on **Flickr30k dataset** for optimal performance.

W-Health | *Google Solution Challenge 2024* ***Top 100 Finalist*** — Jan 2024 – Jun 2024

- Developed a women-centric mobile application using **Flutter** and **Dart**, featuring a supportive forum and personal health assistant bot to empower women with health information and resources.
- Implemented a healthcare assistant using **Google Gemini**, integrating API communication, AI prompt handling for training, and a chat history feature to enhance user interactions.
- Integrated **Firebase** for user authentication, real-time database management, and analytics to track user engagement and improve the app experience.

Can You Hear Me | *Google Solution Challenge 2023* ***Top 100 Finalist*** — Jan 2023 – Jun 2023

- Developed a mobile app for disaster response using **Flutter** and **Dart**, ensuring cross-platform compatibility for mobile phones and smartwatches.
- Implemented an AI model for image recognition using **TensorFlow** and **TensorFlow Lite**, enhancing real-time disaster detection capabilities.
- Integrated **Firebase** for authentication, real-time database management, and analytics to monitor user activities and improve app performance.
